

SatoshiLabs Group

SatoshiLabs creates advanced security tools and improvements for Bitcoin. Entirely self-funded, it launched in 2013 to develop and produce the world's first cryptocurrency hardware wallet, the Trezor Model One.

Open-source from day one, SatoshiLabs is community-oriented and focused on improving cybersecurity practices while accelerating Bitcoin adoption. With an approach to design that carefully balances security, privacy and ease-of-use, while constantly expanding on all fronts.

The company's flagship product, the Trezor Model T, introduced new security measures such as its full-color touchscreen and Shamir Backup. SatoshiLabs is also the creator of more than 22 innovative security standards like Recovery seed and Passphrase, which have significantly improved the whole industry of online security.

SatoshiLabs became a holding company in March 2020, to coordinate the launch of two new companies, Tropic Square and Invity.

Tropic Square was created to deliver the world's first open-source security chip, freeing the whole InfoSec hardware sector to use more secure, trustless solutions.

Invity brings customers a complete crypto acquisition and exchange environment offering the best rates through a simple interface, directly from your Trezor device.

Present in over 220 countries worldwide, SatoshiLabs products are open source, making the best security solutions accessible to anyone, anywhere.
