TREZOR Model T

The safest place for your coins.

Trezor Model T is an advanced hardware wallet that secures your cryptocurrency keys and other secrets in an isolated offline environment. Sleek and stylish, this palm-sized device is feature-packed to help manage your digital identity as well as your finances. Store credentials and cryptographic keys securely with Trezor's zero-trust design.

Created by SatoshiLabs, the Model T is the newest hardware wallet in the Trezor product line. It brings greater security, privacy, and ease-of-use, thanks to its convenient touchscreen and straightforward user interface.

An onboard internal CPU keeps sensitive operations completely contained, including key generation, key derivation, transaction signing, and more, making sure no data can be leaked or extracted. The addition of a full-color touchscreen also allows you to enter confidential information directly on the device, bypassing the risk of using a networked computer.
